Burgundy Tower, #206
1001 W. Eules Blvd
Eules, TX 76040

Dear Mr. Rice,

This letter is to notify FilesAnywhere that Fortrex has completed a formal risk assessment of the FilesAnywhere IT operations in January 2008. Our conclusion is that FilesAnywhere as of the date of the risk assessment is meeting information security industry best practices and guidelines for the sections of ISO 27002 that are pertinent to the information security and handling of information belonging to FilesAnywhere customers, and could be verified through a remote security audit of this type.

In addition Fortrex finds that the direct correlations of HIPAA, GLBA and SOX to the relevant sections of ISO 27002 for FilesAnywhere are all in conformance. The Fortrex assessment was conducted entirely remotely, and included industry-standard external vulnerability testing to verify compliance as stated.

It is strongly recommended that FilesAnywhere remain vigilant in protecting critical assets by reviewing all relevant technology and policies on an ongoing basis. If FilesAnywhere maintains a strong security commitment it may be possible to successfully pass SAS 70 information security audits conducted in the future.

Sincerely,

A handwritten signature in black ink, appearing to read "C. Konrad", is written over a thin horizontal line.

Christopher J. Konrad
Senior Vice President Client Services
